

True formula, observed data, and both methods

**FIT-ONLY METHOD — unconstrained degree-10 least-squares polynomial (minimizes in-window SSE only; no structural model)**

$$f = -1.094 \times 10^{-4}x^{10} + 2.992 \times 10^{-4}x^9 - 9.128 \times 10^{-5}x^8 + 1.316 \times 10^{-4}x^7 - 1827x^6 - 1473x^5 + 749.5x^4 - 147.2x^3 + 15.64x^2 + 1.504x + 1.003$$

**CANONICALSR — label-blind multi-route canonical recovery (near-exact fit first; among equally exact, fewest operators)**
